SUMMARY

Motivated graduate with hands-on experience in web development and software fundamentals. Strong foundation in object-oriented programming and data structures, with experience in developing efficient and scalable applications. Focused on writing clean, maintainable code and improving application performance through structured development practices.

EDUCATION

B.E. Computer Science and Engineering — CK College of Engineering & Technology — CGPA: 8.20	2022–2026
HSC — Government Girls Higher Secondary School — 80.5%	2021–2022
SSLC — Lakshmi Chordia Memorial Matric Higher Secondary School — 73.4%	2019–2020

TECHNICAL SKILLS

Languages	Java, JavaScript, Python
Web Technologies	HTML5, CSS3, Bootstrap, Tailwind CSS, React.js, REST APIs, Express.js, Node.js
Database	MySQL, MongoDB
Tools	Git, GitHub, Postman, Visual Studio Code, Figma, Canva

EXPERIENCE

Software Engineer Intern – Full Stack Development Jul 2025 – Aug 2025

Ocean Academy, Puducherry

- Engineered end-to-end web modules using Java, JavaScript, HTML5, and CSS3, reducing code redundancy by 30% through modular OOP design patterns.
- Designed and integrated RESTful APIs for seamless frontend-backend communication; validated request/response payloads through systematic debugging, eliminating 90% of runtime errors in modules.
- Collaborated in an agile team across 2-week sprint cycles using Git and GitHub, enabling conflict-free merges across shared branches and improving delivery coordination.
- Executed full SDLC lifecycle from requirement analysis to deployment, improving feature delivery efficiency by 20% through optimized testing workflow.

Web Developer Intern (Virtual)

Oct 2024

Oasis Infobyte

- Crafted responsive, accessible web interfaces with CSS3 and JavaScript, achieving consistent cross-browser rendering across Chrome, Firefox, and Edge.
- Optimized frontend performance through efficient DOM manipulation, improving page load time and usability.
- Built accessibility-friendly semantic HTML5 layouts, improving usability across multiple devices and screen sizes.

PROJECTS

Pneumonia Diagnosis and Classification Prediction – 3D CNN

- Constructed a medical diagnostic platform using Python and TensorFlow with an interface to upload and analyse chest X-ray and CT Scan images.
- Applied data augmentation and constraint-based learning techniques, achieving 85% classification accuracy.

Real-Time Face Recognition System

- Developed a computer vision system using Python and OpenCV with a responsive web interface (HTML, CSS, JavaScript) for real-time multi-face detection.
- Leveraged feature encoding and matching techniques, increasing recognition accuracy by 20% and reducing false positives by 15%.
- Structured system into 3 core modules: detection pipeline, encoding engine, and live recognition flow.

Autonomous Line-Follower Robot

- Programmed an Arduino-based robotic system in C using IR sensors and L298N motor driver for autonomous navigation.
- Tuned calibration logic, reducing path deviation by 30% and improving motion stability during real-time operation.

CERTIFICATIONS

- Fundamentals of Java Programming – Coursera
- Frontend Web Development (HTML, CSS, JavaScript) – Udemy
- CSS Basics – HackerRank
- SQL Bootcamp – LetsUpgrade
- The Joy of Computing Using Python (Score: 65%) – NPTEL
